## OUR PRACTICE

As a firm, Iron Horse creates spaces that encourage healthy, dynamic, and productive workplace environments. Our smart design solutions result from delivering value that enhances our client's organization, operations, culture, and makes long term contributions to the client's bottom line. By utilizing Building Information Modeling (BIM) from concept to completion, we create flexibility in design and offer options and cost variances to clients for easy comparison.

Iron Horse's diverse portfolio includes a variety of projects and contract types for both public and private organizations. We have built our talent base, resources, and experience with flexibility in mind, making it possible for us to accommodate the strict time and budget constraints our clients face.

Iron Horse provides reliable partnering, project management and multidisciplinary coordination with our clients. We provide specialized attention from our most senior staff members throughout the life of any project. The implementation process incorporates and facilitates the latest in computer based design and communication technologies to allow integration of management, decision-making, documentation, and project delivery in concert with key stakeholders, and consultants.

## OUR PHILOSOPHY

The work we do positively impacts communities, by creating safe, revitalized environments and spaces that efficiently facilitate the great work of our clients. At Iron Horse Architects Inc. (Iron Horse) we enjoy finding solutions for our client's toughest challenges. Our team follows a design philosophy which reaches beyond traditional thinking to create holistic solutions that are sustainable and adaptable. Throughout our projects, we stay focused on the concerns of the owner and the needs of the end user.

We specialize in several markets providing particular strengths in each.
